

WHAT YOU NEED TO KNOW

about Superway White Ant Terminator TERMITE BAIT

Superway White Ant Terminator Termite Bait is an approved insect development inhibitor type insecticide and can be used as part of a termite interception and baiting system or directly into Termite Workings. It is suitable for all termite species except the Mastotermes darwiniensis species. It has been specifically approved by the Australian Pesticide and Veterinary Medicines Authority. The active ingredient in the Termite Bait is taken back to the Nest whereby it spreads through the nest over a short period of time, inhibiting the growth of the termite colony and eventually eliminating the nest.

Where it can be used?

Superway White Ant Terminator Bait is recommended for use with the White Ant Terminator in ground Baiting station (www.superway.com.au) however can be used in other in ground /aboveground baiting stations. It may also be placed directly into termite workings or other areas where termite presence is detected e.g. fences, poles, trees, bridges.

Instructions for Use

Superway White Ant Terminator Termite Bait is recommended for use with in-ground and above-ground Termite Baiting stations after Termites have been detected.

In-ground baiting stations are designed to intercept foraging termites with a food source attractive to Termites and to concentrate the Termites feeding in the stations. The Termite Bait is only applied to the baiting stations after termites have been detected and to be effective are there in sufficient numbers (approx 1 cupful as a guide).

A 500g container of White Ant Terminator Termite Bait contains sufficient ingredients for up to **5 TREATMENTS** of active Bait stations.

Extreme care must be taken not to disturb the nest/feeding termites to ensure best possible outcome. If disrupted, the Termites will leave the relocate elsewhere.

Wear disposable latex gloves so that no odours or smells that may deter termite feeding are transferred to the bait matrix.

It may be necessary to undertake a further treatment after a month or so, however if unsure, please do not hesitate to contact the manufacturer direct for advice.

HOW TO USE

Superway White Ant Terminator TERMITE BAIT

Measure 100g of the bait powder into a suitable container. (eg empty bucket/ice cream container)

Add 300-400 ml of clean water to the powder.

Mix the water and powder together to form paste. Additional water can be used if conditions are hot and dry.

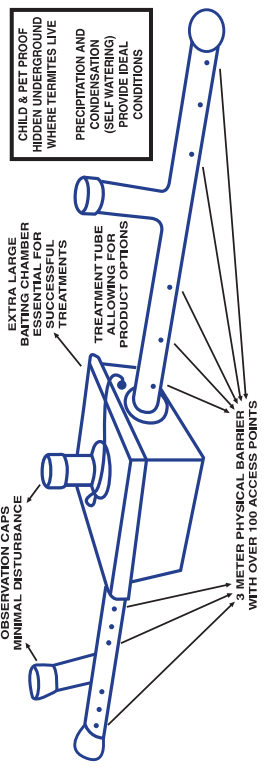

Pour the paste into the top of the bait station or directly into termite workings.
