

# ADVANCED SEED COATING TECHNOLOGY AGRICOTE

AgriCote is a tailored seed coating treatment that conveniently combines all the AgriCote technologies into the one high performing coat.

Starting with the highest quality seed available, Heritage Seeds then add advanced binding and protective polymers with lime as the basis for this cutting-edge seed coating technology. The polymer formulation enables the seed to be coated evenly, which makes it easier to work with on farm and promotes a more even seed distribution in the paddock. In addition, the lime helps to optimise the pH level immediately around the germinating seed, which promotes faster moisture uptake by the seed and better establishment.

AgriCote treatments include nutrients designed to be immediately available to the seedling, protection against fungal diseases through a fungicide treatment and insecticidal treatments to provide protection from biting and sucking insects.

AgriCote is designed to enhance seedling establishment by delivering improved early seedling vigour and root development, through the inclusion of growth promoting and dormancy breaking technologies.

In addition to all of these state-of-the-art elements, AgriCote also features encapsulated rhizobia, which prolongs shelf life of treated legumes and helps to ensure good legume nodulation in the paddock, maximising your investment.

Not only easy to use on farm, AgriCote offers farmers and graziers improved germination, enhancing the overall health and well-being of your seedlings. This revolutionary seed coating technology also provides better seedling tolerance of post emergent stresses, which helps successfully grow productive pastures in challenging conditions.

**AgriCote Seed**  
typical coating make-up

**Lime Coating**  
creates a favourable  
germination environment

**Fungicide Protection**  
option of pythium and  
phytophthora protection

**Protective Polymer**  
protects and isolates bacteria

**Bonding Polymer**  
bonding AgriCote seed capsule

**NPKS and  
T.E. Nutrients**  
immediate rhizobia and  
seedling nutrition

**Growth Promotant**  
promotes establishment  
and seed vigour

**Legume Inoculant**  
promotes legume  
establishment and persistence

## THE POTENTIAL BENEFITS INCLUDE:

- Dormancy breaking technology which is not available in any other seed coat.
- Greater plant establishment.
- Growth promoting chemicals included for improved early vigour.
- Greater earlier root growth and development.
- NPK macronutrients and trace elements that are immediately available to the seedling.
- A more robust seedling for slow establishment grasses.
- Encapsulated rhizobia for longer shelf life and successful in the field nodulation convenience.
- Protection against biting and sucking insects.
- Protection against fungal diseases.
- Improved tolerance to stress.
- Better ballistic properties for flying seed onto hill country or extensive grazing systems.
