# 400

## CHEMICAL HERBICIDES

For the control of woody weeds and unwanted trees in forestry, pasture, commercial, industrial, and public service areas. Di-Bak G capsules contain

Glyphosate and are inserted directly into the trunk ensuring an effective kill with no adverse effects on the surrounding environment. Di-Bak G is available in 200 or 1000 capsule bottles for insertion into the Injecta gun.

## BIOHERBICIDES

Di-Bak Parkinsonia Bioherbicide has been developed to control the weed Parkinsonia aculeata. The Di-Bak Parkinsonia capsules contain three

native Australian fungi that have been isolated from plants afflicted with a naturally occurring disease known as parkinsonia dieback, which can be lethal to the plant. The formulated capsule is inserted into a hole drilled in the trunk of the tree and sealed within, causing an infection that kills the Parkinsonia naturally. Di-Bak Parkinsonia is available in 200 or 1000 capsule bottles for insertion into the Injecta gun.
