

## PRODUCT INFORMATION

# WSD TROUGH BLOX

## For the Control of Algae and Slime in Stock Troughs

### Product Description

**WSD TROUGH BLOX** is a treatment for troughs to control algal growth and to provide a copper supplement to livestock.

### Type of Preparation

**WSD TROUGH BLOXS** contains 63g/Kg copper in a slowly soluble block for use in stock water troughs.

### Indications

To control algal growth in plastic and concrete troughs.

Milking sheep, dairy cattle & dairy goats: Suitable for use in the water supplies of animals producing milk for human consumption.

### Dosage

Always refer to the label. One 200g block is sufficient for 7000 litre capacity trough for 30 days. One 2kg block will treat 70,000 litres for 30 days.

### Advice On Use

- **WSD TROUGH BLOX** are safe to use with most livestock water supplies.
- Do not use in steel tanks or troughs.
- Do not overdose water supplies when using this product.
- **WSD TROUGH BLOX** should not be used in human drinking water.
- Do not use in areas or districts where high copper levels are known to occur or where there is a risk of chronic copper toxicity.
- Care should be exercised with livestock fed a ration supplemented with copper or if copper bullets have been administered.
- For troughs of less than 7000 litre capacity, each 200g block should be divided into the proportion appropriate to the volume of the trough.
